Parting Thoughts

2023年1月14日   17:32

Sleep, eat, get sunlight and get exercise

Never be afraid to reach out to someone or ask for help

Look for intersections and go an abstraction level below what you are interested in

Coming out of this class, you know how to program

That puts you easily in the top 1% of programming skill among people who are currently alive

Coming out of this class, you know how to program

That puts you easily in the top 1% of programming skill among people who are currently alive

You can (maybe even should) take pride in this

But

don't become an elitist

College is not just about academics
Take time in college to explore what you really want your life to be about

Recommended under constraining your schedule as much as possible and not trying to pick up as many majors as possible or minors
It limits your ability to actually go pursue things that are interesting
There's a lot of constrains when you start picking up majors
Especially now with the new double major morn

Cs161 computer security it's really fun when find the one line issue that spend even 10 hrs no progress while it's hard tho
Cs164 scheme projects

I highly recommend the counter type of person to start these day zero. If you start projects and homework today. They're released. There's a couple of benefits. One usually office hours are far less crowded because most people don't do that And then two inevitably when you get done before everyone else you can help everyone else which is generally teaching is the highest form of learning, So it's a very good way to way to reinforce your knowledge And it's also very

good way to meet people. So yes Jake can attest that in like 161 coffee can attest to it in 285. I always try to finish things early and help people in office hours because it's a very way to actually check. What do you understand and can you explain it to someone?

Philosophy ethics that introduce it using some kinds of Programming theories Booleans and proof one with programming
